Background: The purpose of this study was to determine the prevalence of self-reported hearing loss in a community sample of older adults. Methods: Data were obtained from the National Health and Medical Research Council's Australian Hearing Study, a population-based study of hearing in older adults. Results: The prevalence of self-reported hearing loss was 10.9% in the community sample. Conclusion: The prevalence of self-reported hearing loss in a community sample of older adults is 10.9%.
